

## 5. Watch a seed grow!

- \* Next time you eat a peice of fruit or a vegetable which has a seed, collect as many as you can, clean them, then let them sit by a sunny window sill until they are dry. Place them in a pot of soil and leave ~~in~~ <sup>them</sup> on a sunny window sill to grow. Remember to give them a little drink whenever the soil feels dry.
- \* If you don't have soil, some plants only need water to grow. Cut the end off a bunch of celery and place in a cup of water. After a little while you will see new shoots begin to grow!
